***Terminal Disclaimer***

1. The terminal disclaimer filed on March 15, 1999 disclaiming the terminal portion of any patent granted on this application which would extend beyond the expiration date of U.S. Patent No. 5,723,005 has been reviewed and is accepted. The terminal disclaimer has been recorded.

***Allowable Subject Matter***

2. Claims 1-43 are allowed.
3. The application having been allowed, formal drawings are required in response to this Office action.
4. The following is an examiner's statement of reasons for allowance:

The prior art fails to disclose or teach an implant comprising an elongated member having a pair of ends and an outer surface wherein one of the pair of ends includes a thin elongated lip *which protrudes beyond the outer surface of the elongated member and is located approximately 300 degrees or less of the periphery of the elongated member leaving a posterior surface free from protruding into or from contacting with or abrading a surface of the eye including the cornea or conjunctiva*, the thin elongated lip being located on the elongated member to position the thin elongated lip in a generally anterior direction upon insertion in to a punctum opening to position the posterior surface away from a surface of an eye, the elongated member being formed of a dimension to pass through a punctum opening of an eye (emphasis added).

The prior art further fails to disclose or teach an implant comprising an elongated member having a pair of ends wherein one of the pair of ends terminates in a tip insertion section having a distal starting tip having a cross sectional dimension that penetrates a punctal opening defined by a fibrous tissue and wherein the distal starting tip has a selected length to pass through the punctal opening to enable the tip insertion section to gently expand the sphincter muscle defining the punctum opening into a generally oval shape. The instant invention is patentably distinct from Tajiri (U.S. Patent No. 5,423,777) in that Tajiri includes a bulb portion that stretches and elongates to facilitate pushing the plug into the duct (col. 4, lines 22-25), which is inapposite to the manner of insertion of the instant invention. Tajiri does not disclose or teach an implant wherein the tip insertion section is in the form of a collapsible flared section and has a distal starting tip which gently expands the sphincter muscle (i.e., not duct) defining the punctum opening to a dimension and shape sufficient for passing the tip insertion section.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
